

# TRANSPORT SECURITY ACCESSORIES.

**Individual solutions. Resource-efficient. Cost-effective.**

Transport security accessories are used to safely support window and door sashes within the outer frame during transport. They stabilize the element, minimize movement within the frame and support damage-free transport.

The transport security accessories made of polypropylene (PP) are temporarily clipped into the outer frame and removed again after proper installation. This creates an economical solution without permanently affecting the building element.

## Key advantages at a glance

- ✓ Temporary support of window and door sashes
- ✓ Quick clip-in installation in the outer frame
- ✓ Removable without residue after installation
- ✓ Economical and resource-efficient
- ✓ Available in colours matching the element

## Material and design

Manufactured from polypropylene recycled material (PP).

The material is dimensionally stable, lightweight and designed for temporary use in transport and logistics applications.

Standard colours:

- White (RAL 9016)
- Brown (RAL 8003)

Additional colours available on request.

Minimum order quantity: 1 packaging unit (PU).

## Typical applications

- Transport protection for window elements
- Support of door sashes during storage and delivery
- Stabilization of elements in production and logistics

## Function and handling

- Clip the transport security accessory into the outer frame
- Transport or store the element
- Remove again after installation

**No permanent connection with the building element is required.**
