

# ASSEMBLY ACCESSORIES.

## FOR LEVELLING, SPACING AND SECURE SUPPORT.

Our assembly accessories support precise levelling and adjustment tasks in daily construction and installation work. The range includes functional solutions made from resource-saving recycled plastic and high-quality hardwood – designed for efficient use in workshops and on construction sites.

## ASSEMBLY SPACERS.

### For levelling, spacing and secure support.

Assembly spacers enable precise alignment of building elements in window and door construction as well as in interior and drywall applications. They ensure reliable load transfer and support professional installation.

### Key advantages at a glance

- ✓ High load capacity due to solid construction
- ✓ Anti-slip surface with fine ribbing
- ✓ Resistant to many common construction chemicals
- ✓ Compatible with common edge seal materials
- ✓ Universally applicable

### Material

Manufactured from polypropylene. The material is moisture-resistant, dimensionally stable and suitable for long-term use in construction environments.

### Typical applications

- Levelling and aligning window and door frames
- Height adjustment during installation work
- Spacing in interior construction and drywall systems
- General substructures in construction applications

## Technical properties

- Dimensionally accurate design for precise adjustment
- Compression-resistant even under point loads
- Suitable for various installation situations
- Resistant under typical construction site conditions

## UNIVERSAL

Colour variations may occur due to recycle base material.
