

# ASSEMBLY FIX.

## Installation aid for precise alignment and secure positioning.

Assembly fix is the ideal support for window and door installation as well as for wooden substructures in interior construction and drywall applications. Unlike conventional assembly spacers, the system is specifically designed for vertical use. It enables controlled vertical levelling, supports the precise alignment of building elements and facilitates efficient work on site.

### Key advantages at a glance

- ✓ Designed for vertical levelling and support
- ✓ Facilitates precise alignment of building elements
- ✓ Fast and secure installation
- ✓ Fixing hooks prevent slipping during positioning
- ✓ MTF GRIP variant with "grip" locking function and insertion bevel

### Typical applications

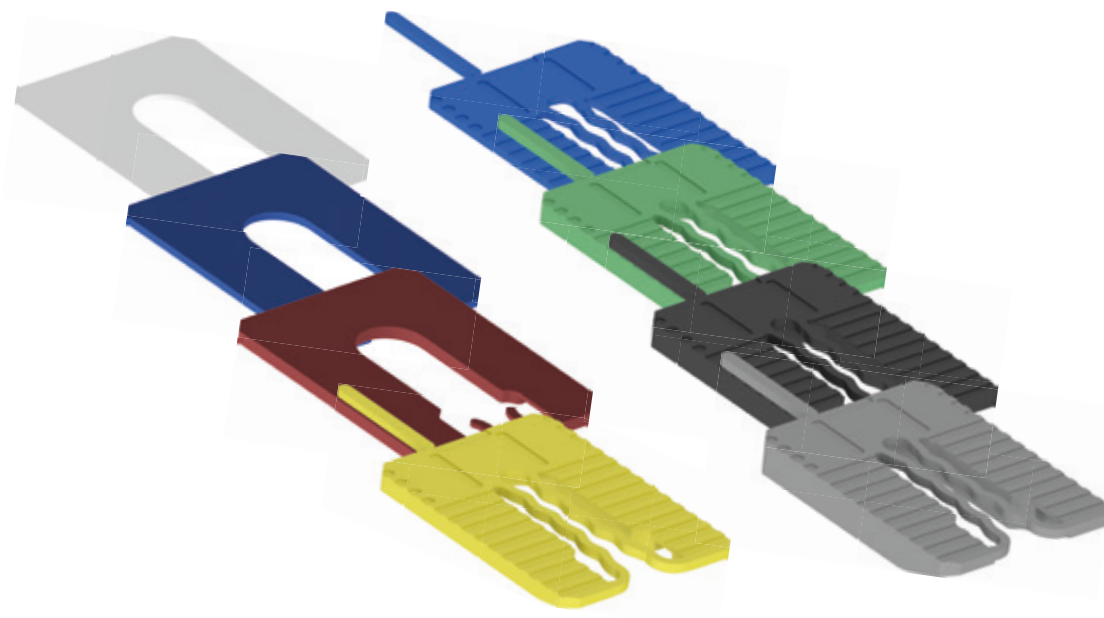

- Installation of window and door frames
- Alignment of elements in structural construction
- Wooden substructures in interior construction
- Applications in drywall installation

### Function and handling

- Insert into the required position
- Fixation through integrated retaining elements
- Adjustment of the component during installation

**The design supports secure temporary fixation until the final fastening is completed.**

## UNIVERSAL
